MRServo – Slow Motion Switch Machine

MRServo is a low-cost, low-profile, slow motion model railroad switch machine. Using inexpensive and small RC servos, MRServo provides a cost-effective way to add slow-motion turnouts to your layout.

- ☐ MRServo-1
Cost-effective, reliable slow motion turnout drive
- ☐ MRServo-2
Includes two sets of accessory contacts (DPDT)
- ☐ MRServo-3
Includes PowerFrog and one set of accessory contacts
